```
This sequence represents the mutated CH2 molecule Gldeltaac, and is a binding molecule of the invention. The recombinant binding molecule is capable of binding a target molecule without triggering complement dependent lysis, or the cell-mediated destruction of the target comprises: (a) a binding domain capable of binding a target molecule.

CC comprises: (a) a binding domain capable of binding a target molecule; and effector domain that is homologous to all or part of a constant comain of a human immunoglobulin G (IgG) heavy chain. The binding molecule is used to bind a target molecule (especially FogammaRilb C causing inhibition of B cell activation, mast cell degranulation or phagocytosis). The binding molecule or, an antibody, to the target of binding of a second binding molecule, e.g. an antibody, to the target consecue. The binding molecule is useful for the treatment of phagocytosis). The binding molecule is useful for the treatment of crejection, autoimmunity (e.g. vascullitis, autoimmune haemolytic anaemia, cutoimmune thrombocytopaenia and arthritis), alloimmunity and chrombocytopaenia and arthritis), alloimmunity (e.g. foetal/neonatal alloimmune thrombocytopaenia, asthma and allergy), chronic or acute inflammatory diseases (e.g. Crohn's, HDN (e.g. foetal/neonatal alloimmune thrombocytopaenia, asthma and cervonary artery occlusion). The binding molecules do not activate of properties have been retained. The polypeptides do not contain of groperties have been retained. The polypeptides do not contain on human amino acids, and are therefore likely to have reduced immunogenicity. Further, they still bind protein A, which is consistent contain a being able to cross the human placenta through interaction with FCRn channel FCRn and a processed to the contain and the contain and and are therefore likely to have reduced immunogenicity.
                                                         Immunoglobulin-derived binding molecules that do not activate complement or trigger cytotoxic activities and maintaining desirable
                                                                                                                                                                                            Claim 12; Fig 17; 81pp; English.

This sequence represents the mutated CH2 molecule Gldeltaab, and is a binding molecule of the invention. The recombinant binding molecule of the invention. The recombinant binding molecule of scapable of binding a target molecule without triggering complement dependent lysis, or the cell-mediated destruction of the target comprises: (a) a binding domain capable of binding a target molecule; and comprises: (a) a binding domain capable of binding a target molecule; and domain of a human immunoglobulin G (igG) heavy chain. The binding constant domain of a human immunoglobulin G (igG) heavy chain. The binding molecule causing inhibition of B cell activation, mast cell degranulation or phagocytosis). The binding molecule can be used to prevent or inhibit the binding of a second binding molecule, e.g. an antibody, to the target molecule. The binding molecule is useful for the treatment of carafter disease, organ transplant rejection, bone-marrow transplant rejection, autoimmune thrombocytopaenia and arthritis, autoimmune thrombocytopaenia and arthritis, autoimmune thrombocytopaenia and arthritis, autoimmune caute inflammatory diseases (e.g. Crohn's, HDN (e.g. total/neonatal alloimmune thrombocytopaenia, asthma and allergy), chronic or acute inflammatory diseases (e.g. Crohn's, HDN (e.g. trigger cytotoxis) foetalis), The binding molecules do not activate complement or trigger cytotoxia, activities through FogammaR and desirable complement or trigger cytotoxia, and compared and arthribite complement or trigger.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Igg properties have been retained. The polypeptides do not contain mon-numan amino acids, and are therefore likely to have reduced immunogenicity. Further, they still lond protein A, which is consistent with being able to cross the human placenta through interaction with FcRn
                                                                                                                                                                                                                                                                                    Immunoglobulin-derived binding molecules that do not activate complement or trigger cytotoxic activities and maintaining desirable
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antibody; humanised; variable region; heavy chain; light chain; interferon gamma; IFN; treatment; prevention; septic shock; cachexia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

New antibodies which bind and neutralise interferon-gamma (IFN gamma) can be used as a medicant, for preventing or treating septic shock, cachevia, immune diseases including multiple sclerosis and Crohn's disease and skin discoders including bullous, and Crohn's disease and skin discoders including bullous.

CC inflammatory and neoplastic dermatoses. The antibody is selected from a single chain antibody (ScFV), a chimeric antibody or diabody comprising the humanised variable domain of the monoclonal mouse anti-IFN gamma antibody 09D10; a multivalent antibody or a ruminant comprising the antibody 09D10; a multivalent antibody or a ruminant articody. The antibody of selected antibody or antibody were constructed. The light chain comprised cDNA encoding the mouse D9D10 alight chain fusion proteins of the humanised D9D10 light chain leader sequence. The humanised D9D10 light chain leader sequence constructed of humanised D9D10 light chain leader sequence constant domain in which the Clq-complement comprised cDNA encoding the mouse D9D10 light chain leader sequence. The manised D9D10 light chain leader sequence. This was then subsequently amplified using two primers (AAX08585-88) were used to construct the D9D10 light chain leader sequence. This was then subsequently amplified using two primers (AAX08594) and then cloned into pGEM-T-VHH using two fragments had a base pair overlap and were fused together using compensate NaX08593, AAX08594) and then cloned into pGEM-T to give with two primers (AAX08594) and then cloned into pGEM-T to give with two primers (AAX08594) and then cloned into pGEM-T to give
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     with two primers (AAX08595, AAX08596) and cloned into pGEM-T to give pGEM-TCh. Two separate PCR amplifications were then performed using pGEM-T-Ch as a template. The primers used were AAX08599, AAX08599 to generate PCR-VIII fragment and AAX08597, AAX08600 to generate PCR-IX fragment. These were then overlapped and fused using primers AAX08599, AAX08600 and the resulting PCR-X fragment inserted into pGEMLGrVHh to generate the complete heavy chain fusion DNA in a vector designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New engineered antibodies which bind and neutralise interferon-gamma - useful for prevention and treatment of septic shock, cachexia, immune diseases and skin disorders

Novel fusion protein constructs comprise a fibroblast growth factor (FGF) receptor (FGF-R) extracellular domain (ECD) lacking the immunoglobulin (GG (Ig)) regement fused to a heterologous oligomerization domain that comprises an immunoglobulin Fc region, hinge region, CH1, CH2, CH3 or CH4 region, or light chain of an immunoglobulin molecule, or a peptide with a comprise rmotif. The Ig I segment is not necessary for binding of acidic FGF and basic FGF (PFGF). The Ig I deletion further increases the cord affinity for aFGF and heparin, protects the core of the molecule from new fusion polypeptides are better FGF inhibitors than FGF-R monomer or proteins. The FGF-R inhibitors than FGF-R monomer CC proteins. The FGF-R for fusion dimmers are active as FGF antagonists at subnanomolar concentrations and were 20-fold more potent than the FGF-R monomer protein as competitors of bEGF binding to immobilized FGF-R fusion constructs are useful to treat FGF-, angiogenesis, or CGF-R-mediated disorders, such as tumourigenesis (e.g. bladder, breast, lung, rectal, testis and cervical tumouris), meovascular smooth muscle cells (e.g. postangioplasty and postatherectomy restenosis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Novel fusion protein constructs comprise a fibroblast growth factor (FGF) receptor (FGF-R) extracellular domain (ECD) lacking the immunoglobulin (CG receptor (FGF-R) extracellular domain (ECD) lacking the immunoglobulin CC receptor (Ig) I segment for a heterologous oligomerization domain that comprises an immunoglobulin Fc region, hinge region, CH1, CH2, CH3 or CH4 region, or light chain of an immunoglobulin molecule, or a peptide with a comprise inotif. The Ig I segment is not necessary for binding of a cidic FGF and basic FGF (BFGF). The Ig I deletion further increases the core affinity for aFGF und heparin, protects the core of the molecule from the fusion polypeptides are better FGF inhibitors than FGF-R monomer content only peptides are better FGF inhibitors than FGF-R monomer content as competitors of BFGF inhibitors than the FGF-R monomer constructs are useful to treat FGF-, anglogenesis-, or fusion diamers are active as FGF antagonists at subnanomolar constructs are useful to treat FGF-, anglogenesis-, or clung, rectal, testis and cervical tumnurigenesis (e.g. bladder, breast, clung, rectal, testis and cervical tumnurs), neovascularization (e.g. diabetic retinopathy, neovascular smooth muscle cells (e.g. postangioplasty and postatherectomy restenosis).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

receptor (FGF-R) extracellular domain (ECD) lacking the immunoglobulin

(IG) I segment fused to a heterologous oligomerization domain that

comprises an immunoglobulin Fc region, hinge region, CHJ, CHJ, CHJ, CHJ, CHJ,

region, or light chain of an immunoglobulin molecule, or a peptide with a

leucine zipper motif; The Ig I segment is not necessary for binding of

eucidic FGF and basic FGF (bFGF). The Ig I deletion further increases the

coidic FGF and basic FGF (bFGF). The Ig I deletion further increases the

affinity for aFGF and heparin, protects the core of the molecule from

proteolysis, and abrogates the heparin requirement for aFGF binding. The

new fusion polypeptides are better FGF inhibitors than FGF-R monomer

proteins. The FGFR-IG FC fusion dimers are active as FGF antagonists at

submanomolar concentrations and were 20-fold more potent than the FGF-R

monomer protein as competitors of bFGF binding to immobilized FGF-Rs. The

fusion constructs are useful to treat FGF-, anglogenesis, or

fusion constructs are useful to treat FGF-, anglogenesis, or

FGF-R-mediated disorders, such as tumourigenesis (e.g. bladder, breast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polypeptide comprising a fibroblast growth factor receptor extracellular domain fused to a heterologous oligomerization domain for treating FGF-, anglogenesis-, or FGF receptor-mediated disorders
                                                                                                                                FGF-R; fibroblast growth factor receptor; extracellular domain; IgG1; immunoglobulin; G1; oligomerization domain; Fc region; fusion protein; inhibitor; dimer; antagonist; cytostatic; anti-diabetic; vulnerary; ophthalmological; anti-proliferative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            294..525

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a modified human IgG1 Fc region in which the FCGRI binding site has been mutated from Leu-Leu-Gly-Gly Lo Ala-Glu-Glu-Ala in order to reduce FCRI binding, and residues Ala-134 and Pro-135 have been altered to Ser-134 and Ser-135 to reduce complement Clq binding and/or complement fixation. The mutations were introduced into the native FC DNA sequence by PCR-mediated mutagenesis (see also AAX5272). The construct was utilised in the preparation of ZTNFR-6-1g fusion vectors. Soluble ZTNFR-6 (see AAVD5679) was expressed in BHK 570 mammalian cells and also in baculovirus-infected Spodoptera frugiperda sf9 insect cells. ZTNFR-6 is a novel human tumour necrosis factor receptor. ZTNFR-6 puppetides are useful for promoting cellular maturation and hone cell remulation.
secreted or membrane bound tumor necrosis factor receptor 'R-6 - useful for detecting a genetic abnormality in a patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

This polypeptide comprises a modified human IgG1 Fc region. IgFc cDNA was amplified from a human foetal liver library by PCR (see AAX072031). PCR was also used to introduce mutations within the Fc region to reduce FcgRI binding, and to introduce A1345 and P1355 mutations to reduce complement Clq binding and/or complement fixation (see also AAX07232). Mammalian and baculovirus expression vectors for soluble mutated IgFc were prepared, and used to construct ZTNRFR-5-mutated IgFc were prepared, and used to construct ZTNRFR-5-mutated IgFc were prepared, and used to soluble mutation temour necrosis factor receptor ZTNFR-5. ZTNFR-5 polypeptides and nucleic acids (see AAX07256) can be used to screen for ligands, agonists and antagonists of ZTNFR-5. The polypeptides can be used in bone cell regulation and to regulate the maturation of TNF ligand-bearing cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Inhibiting ztnf4 activity in a mammal, to treat autoimmune diseases, renal disease, graft versus host disease, and inflammation, comprises administering a BR43x2, TACI or BCMA extracellular domain polypeptide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        renal failure, glomerulonephritis, wascultis, nephritis, proposed and allowed glomerulonephritis, man incoplasms, multiple myelomas, lymphomas, light chain neuropathy, amyloidosis, moderating immune response, immunosuppression, graft rejection, graft versus host disease, inflammation, insulin dependent diabetes mellitus, Crohn's disease, joint pain, swelling, anaemia, or application con an entagonists can be used to treat hypertension, renal artery stenosis, or occlusion, and cholesterol or renal emboli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Interleukin 20; IL-20; IL-20RA; ZcytoR7; IL-20RB; DIRS1; immunoglobulin; antiinflammatory; antipsoriatic; antiasthmatic; antibacterial; human; dermatological; antiulcer; antagonist.
                                                                                                                                                A human Fc region polypeptide, which is used in the course of the invention. The specification describes extracellular domains of BR43x2 (an isoform of the transmembrane activator and CAML-interactor (TACI) receptor). TACI or BCMA (a related B cell protein). These contain a cysteine rich domain, and are used for inhibiting ztnf4 activity. They may also be used for inhibiting BR43x2, TACI or BCMA receptor-ligand engagement associated with activated or resting B lymphocytes, effector T-cells, or with antibody production. The antibody production is associated with an autoimmune disease selected from systemic lupus erythematosus, myasthenia gravis, multiple sclerosis and rheumatoid arthritis. The ztnf4 activity and BK43x2, TACI or BCMA receptor-ligand engagement is associated with asthma, bronchitis, emphysema, end stage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated interleukin 20 soluble receptor comprising two polypeptide subunits IL-20RA and IL-20RB, useful for down-regulating IL-20 and thus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Foster

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an interleukin 20 (IL-20) soluble receptor comprising two polypeptide subunits IL-20RA (formerly known as ZcytoR7) and IL-20RB (formerly known as DIRS1). The two subunits are preferably linked together. In one embodiment, one subunit is fused to the constant region of the light chain of an immunoglobulin, and the other subunit is fused to constant region of the heavy chain of an immunoglobulin. The light chain and the heavy chain are connected via a disulphide bond. The soluble receptor can be used to down-regulate IL-20 and thus treat inflammatory diseases such as psoriasis, inflammatory ung injury such as asthma or bronchitis, adult respiratory disease (ARD), septic shock, multiple organ failure, bacterial pneumonia, eczema, atopic and contact dermatitis, and inflammatory bowel disease such as ulcerative colitis and Crohn's disease. The present sequence represents the extracellular domain crown immunoglobulin gamma I constant region.
                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   eczema;

Treating interleukin-20 induced inflammation in a mammal, such as adult respiratory disease, eczema, psoriasis, contact dermatitis, multiple organ failure and septic shock, involves administering IL-20 antagonist
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence represents the Human interleukin-20 receptor A, IL-20RA/ inmunoglobulin kappa heavy chain fusion protein, consisting of a signal peptide from tissue plasminogen activator; tpa, amino acids 30-243 of IL-20RA (extracellular domain) and human immunoglobulin kappa heavy chain. The invention relates to treating a mammal afflicted with a disease in which an interleukin-20 (IL-20) polypeptide plays a role, involves administering antagonist of IL-20 polypeptide to the individual. The method is useful for treating psoriasis, eczema, atopic dermatitis, contact dermatitis, adult respiratory disease, asthma, bronchitis and pneumonia and is also useful for treating multiple organ failure, inflammatory lung injury, septic shock, bacterial pneumonia, inflammatory bowel disease, rheumatoid arthritis, ulcerative colitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Interleukin 20; IL-20; IL-20RA; ZcytoR7; IL-20RB; DIRS1; immunoglobulin; antiinflammatory; antipsoriatic; antiasthmatic; antibacterial; human; dermatological; antiulcer; antagonist.

The sequences given in AAR41682-85 are encoded by the expression vector,
                                                                                                                                                                                              In humans, IgG1 may exist as either of two allotypes at site 1, 2 or 17. The inventor's propose eliminating these allotypes by amino acid changes to agree with the sequences of igG2, IgG3 and IgG4. None of the allotype sites (1, 2 and 17) are located within the CH2 domain. New "isoallotypes" should be suitable for therapeutic use in all patients. See AAR27678-R27681.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                            The invention relates to an interleukin 20 (IL-20) soluble receptor comprising two polypeptide subunits IL-2DRA (formerly known as EcytoR7) and IL-2DRB (formerly known as DIRSI). The two subunits are preferably linked together. In one embodiment, one subunit is fused to the constant region of the light chain of an immunoglobulin, and the other subunit is fused to constant region of the heavy chain of an immunoglobulin. The light chain and the heavy chain are connected via a dissiphide bond. The soluble receptor can be used to down-regulate IL-20 and thus treat inflammatory diseases such as psorthasis, inflammatory lung injury such as asthma or bronchitis, adult respiratory disease (ARD), septic shock, multiple organ failure, bacterial pneumonia, eczema, atopic and contact Crohn's disease. The present sequence represents DNA sequence of a construct containing the extracellular domain of IL-20RA fused to a
                                                                                                                                                                                              Isolated interleukin 20 soluble receptor comprising two polypeptide subunits IL-20RA and IL-20RB, useful for down-regulating IL-20 and thus treating inflammatory diseases such as psoriasis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

chain variable region (VH) of the antibody 128.1, an amplcillin resistance gene and a histidine (histidinel) selection marker.

resistance gene and a histidine (histidinel) selection marker.

Transcription of the VH gene is from the VH promoter of the murine chiancer and the human gammal constant region (CH). The VH region of pAH4274. This was achieved by digesting the plasmid and the product with EcoRV and Nhel. The VH gene was inserted in-frame with the human gammal characterial and the plasmid and the product with EcoRV and Nhel. The VH gene was inserted in-frame with the human gammal CH region CH at the 3' end of the VH-J region by means of a Nhel site. 128.1 is an anti-human transferrin receptor antibody which binds to the transferrin receptor on brain capillary endothelial cells. This antibody may be used in a conjugate in which it is linked to a neuropharmaceutical or diagnostic agent. The conjugate may be used to treat or prevent neurological disorders eg. brain tumours, AIDS, stroke, all and antibody. diagnostic methods

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pAH4602. This vector contains open reading frames encoding the heavy chain variable region (VH) of the antibody 128.1, an ampicillin resistence gene and a histidine (histidinol) selection marker. Transcription of the VH gene is from the VH promoter of the murine 27.44 gene. The vector also includes a heavy chain immunoglobulin engancer and the human gammal constant region (CH). The VH region of 128.1 was isolated by polymerase chain reaction and cloned into plasmid pAH4274. This was achieved by digesting the plasmid and the product with Ecogy and NheI. The VH gene was inserted in-frame with the human
                     In humans, IgG1 may exist as either of two allotypes at site 1, 2 or 17. The inventor's propose eliminating these allotypes by amino acid changes to agree with the sequences of IgG2, IgG3 and IgG4. None of the allotype sites (1, 2 and 17) are located within the CH2 domain. New "isoallotypes" should be suitable for therapeutic use in all patients. See AAR27678-R27681.
